Electrical Connecting System

A-1 Electricals – Reliable Cable Accessory Solutions for Power & Energy Infrastructure

A-1 Electricals is a leading manufacturer of high-quality **cable accessories and electrical connectivity solutions, serving utilities, EPC contractors, OEMs, and infrastructure developers across power, transmission, distribution, renewable energy, and industrial sectors.

With strong in-house manufacturing capabilities and a focus on engineering precision, A-1 Electricals designs and produces a comprehensive range of products including:

- Shear Bolt Cable Lugs and Connectors
- Substation Aluminium Compression & Bolted Connectors
- Copper, Aluminium & Bimetallic Cable Lugs and Connectors
- Aluminium and Polyamide Cable Cleats
- Cable Terminations and Joints
- Brass Industrial Cable Glands and Accessories
- Flexible Copper Braids and Laminated / Solid Busbars
- Tailor-Made Components for Switchgear, Transformers & Electrical Equipment

All products are engineered and manufactured in accordance with relevant BS, DIN, and IS design standards and are tested as per applicable IEC standards, ensuring consistent electrical performance, mechanical integrity, and long-term reliability under demanding service conditions.

A-1 Electricals operates under a robust ISO 9001 certified Quality Management System, ensuring strict control over raw materials, manufacturing processes, dimensional accuracy, and final inspection. The company places strong emphasis on traceability, process discipline, and continuous improvement to meet the evolving expectations of global markets.

Products supplied by A-1 Electricals are CE & RoHS compliant, making them suitable for international projects and export markets where regulatory compliance, safety, and environmental responsibility are critical.

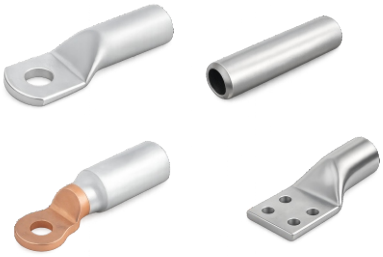
Driven by engineering expertise, manufacturing flexibility, and customer-focused solutions, A-1 Electricals is a trusted partner for reliable cable management, termination, and connectivity solutions across the power and electrical industry value chain.

Tool free cable termination and connector with pre-calibrated shear bolts, ensuring quick installation, correct torque and reliable electrical and mechanical performance for copper and aluminium conductors.

Shear Bolt Cable Lugs & Connectors

High conductivity connectors engineered for EHV substation, ensuring reliable mechanical strength, low contact resistance, and long-term performance under extreme electro-mechancial and environmental conductions.

EHV Substation Connectors

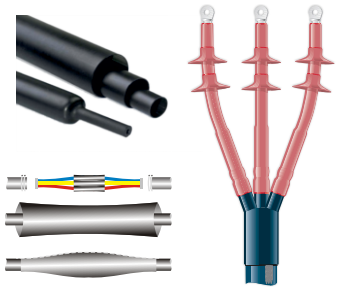


Compression copper, aluminium, & bimetallic cable lugs & connectors provide secure, low resistance, vibration resistant electrical terminations ensuring excellent conductivity and mechanical strength for MV LV application

Compression Cable Lugs & Connectors

Cleats are designed for secure fixing of cables in single and trefoil formation, providing high mechanical strength and reliable short circuit resistant. Suitable for LV, MV and HV applications.

Aluminium & Polyamide Cable Cleats



Cable terminations and jointing systems are used to safely connect cables to equipment and to join cables end to end while maintaining electrical insulation and environmental sealing. Engineered for LV & MV networks.

Cable Termination, Joint & Accessories

Separable cable connectors provide safe, reliable, fully insulated plug in connection of power cables to switchgear & transformers. They enables easy installation, testing & maintenance while ensuring operational safely and flexibility.

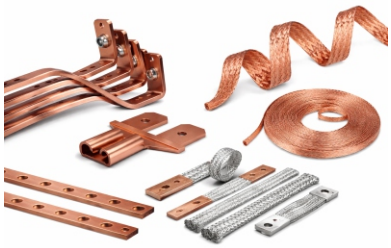
Separable Connectors

Resin cast joints provide robust, moisture-proof insulation for straight-through and branching cable connections, ensuring high electrical reliability, mechanical strength, and long-term performance in underground and outdoor installations.

Resin Cast Straight and Branch Joints

Cable glands ensure secure cable entry with effective sealing, earthing, and strain relief to protect against dust, moisture, and mechanical stress. They ensure safe, durable terminations in industrial, power and hazardous area application.

Cable Galnds



Copper bus bars provide efficient, low-resistance current distribution, while flexible copper braids absorb vibration and thermal expansion. Precision-engineered copper components ensure reliable electrical connections.

Cable Busbar & Flexible Braids
